

Coquitlam Aerial Lift Train the Trainer

Coquitlam Aerial Lift Train the Trainer - The Aerial Lifts Train the Trainer Certification Program teaches trainers how to efficiently train operators in safe industrial mobile machinery operation. Trainers are provided with in-depth instruction on aerial lift equipment. The program is provided on an open enrollment basis and delivered at select training places. Before the certification, trainers are assessed and scored on their demonstrated skills and understanding.

The Aerial Lifts Train the Trainer Certification Program emphasizes practical learning. As the best training provider in the business, we give the best hands-on training possible through opportunities to practice techniques and concepts learned inside the classroom. Along with hands-on experience, trainers develop general knowledge of machinery theory and instructional methods, field and classroom communication skills, and ability to effectively train and assess operators. Trainers would gain knowledge about what traits make a successful trainer.

The Aerial Lifts Train the Trainer Program also teaches the proper methods necessary to be able to express the correct information in the classroom and field setting. There are three factors of machine operation that the trainer should learn how to convey to operators: what to carry out; how to do it; and why it must be done.

The program provides detailed, up-to-date reference material to help trainers convey the subject matter to equipment operators. Instruction manuals include detailed information about all aspects of industrial mobile machine operator training. Included within the package are training aids that provide a visual reference so as to enhance the learning experience. The equipment-specific training products include necessary materials for both the trainer and the operator: overhead transparencies, videos/DVD's, equipment models, safety message posters; stability pyramids and digital training aids.
